Evening Brief

Date: Saturday August 10th, 2019

Weather Summary

One more day of cooler than normal temperatures across the Great Basin, with lingering showers across the Central Mountains of Idaho. Otherwise drier air will be gradually pushing in from the west today. Gusty winds of 20-30 mph expected Sunday afternoon across the eastern Snake River Plain, but humidity and fuel levels should remain high enough to not pose significant fire potential.

Warm, dry air returns to the Great Basin this coming week, along with moderately breezy southwest winds at times. However, no critical winds or lightning activity is expected across the Great Basin over the next several days. There could be some lightning holdovers emerging this week as the warmth and dryness builds.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	3	Moderate Initial Attack Activity
National	3	New Fires and Acres: 29 fires 753 acres; 382 acres large fire growth

Great Basin Fuels/Fire Potential

Sagebrush live fuel moisture values have dropped to near seasonal normals across much of the geographic area and will contribute to fire growth at most lower elevations.

Recent showers/wetting rains have moderated fuel moisture over most of the Great Basin, especially across northern Nevada, northern Utah and southern Idaho. Additional showers Sunday over the mountains of Central will continue to gradually reduce overall fire potential in the short term.

A longer term drying trend is expected this coming week, which will allow fuels to dry again and increase fire potential region wide by the latter part of the week.

Resources:

Aviation within the Great Basin

- 1 VLAT's, 7 LATs, 2 CL-415
- 28 SEATs, 3 Fire Bosses
- 11 Type 1 Helicopters / 11 Committed
- 16 Type 2 Helicopters / 9 Committed
- 22 Type 3 Helicopters

Crews Committed within the Great Basin

- 23 IHCs Committed / 3 Available
- 31 T-2 IAs Committed / 5 Available
